

Innovox[®] MB

Calcium Oxide Granule

A groundbreaking granule-based innovation from Birch Chemicals, which has been engineered to tackle moisture related challenges encountered in the processing of elastomeric compounds. With its unique formulation, Innovox MB sets new standards for performance in the industry.

Innovox MB granules feature a revolutionary composition of 80% Birch Chemicals' industry leading calcium oxide powder dispersed in 20% EP rubber. The Innovox MB granules become an integral part of the rubber compound - unlike competitor product granules, which may contain oils or waxes.

Packaged in low-melt sachets for consistent addition control and combined with an EPDM binder, Innovox MB seamlessly integrates into the rubber compound, guaranteeing a reliable solution for porosity, surface blisters, and other moisture-related issues.

Innovox MB stands out as a superior granular alternative, ensuring a foolproof and dust-free method to achieve the perfect addition every time. Increase your productivity, decrease operating costs and eliminate quality failures by using Innovox MB.

Innovox MB – where innovation and world beating performance meet reliability in elastomeric compound processing. Choose the Innovox MB granule advantage for a seamless and effective solution.

Ideal for

- ✓ Open roller mixing systems
- ✓ Dust free environments
- ✓ EPDM material
- ✓ Doors seals
- ✓ Hoses
